

Put the SAR 40 million into the four regions furthest below 65%.

The ask today: approve this split. SAR 20M is released on Day 0; the other SAR 20M follows a Day-90 check on the Tableau dashboard.

Nationally, Tayseer is on track: it crossed the 65% target in late 2025.

National digital adoption

66.2%

December 2025 · target 65%

Starting point

54%

January 2022

So the national number is fine. **The question is where it isn't.**

But 8 of 13 regions are still below 65%.

Blue = below 65%, orange = on or above. The vertical line is the target.

The 5 regions on target include Riyadh and Makkah, near 71%. They carry the national average.

Najran is lowest at 60.9%, more than 4 points short.

Four regions are 2–4 points short. The other four are under a point away.

FURTHEST BEHIND · 2.0 to 4.1 points short

NEARLY THERE · under 0.7 points short

Gap to 65%, percentage points

The same four are also the costliest to serve

Average cost per transaction, from the CSAT vs Cost view:

- SAR 20.0–20.3** in the four furthest behind
- SAR 19.2–19.8** in the four nearly there
- SAR 18.4–18.8** in the five on target

An even split sends half the money to regions already almost at 65%.

Region (SAR million)	Gap, pts	A · Even split, all 8	B · By gap, all 8	C · By gap, top 4
Najran	4.1	5.0	13.5	15.6
Northern Borders	2.3	5.0	7.5	8.7
Al-Baha	2.2	5.0	7.3	8.3
Jazan	2.0	5.0	6.5	7.4
Asir	0.6	5.0	2.1	0
Tabuk	0.5	5.0	1.7	0
Hail	0.3	5.0	0.8	0
Al-Jouf	0.2	5.0	0.6	0
Spent on the four nearly there	–	20.0 (50%)	5.2 (13%)	0

Each option spends the full SAR 40M · By gap = $40M \times \text{region's gap} \div \text{total gap of the regions funded} \cdot 5$

We recommend Option C: fund the four furthest behind, in proportion to their gap.

Bar length = share of the SAR 40M

Expected effect

If the four reach 65%, every region is within 0.7 points of target.

Why not A or B

They spend SAR 20M or 5.2M on regions already within a point of target.

Uncertainty: the data does not show how many points each SAR million buys, so we release the money in two halves.

Approve the SAR 40M split today. We track it at Day 30, Day 90 and December.

Najran 15.6M · Northern Borders 8.7M · Al-Baha 8.3M · Jazan 7.4M

DAY 0

Approve and release

Committee approves the split.
SAR 20M released, half of each region's share.

DAY 30

Work is live

Programmes running in all four regions. First monthly reading on the Tableau dashboard.

DAY 90 · GATE

Quarter of gap closed

Najran 61.9% · N. Borders 63.3% · Al-Baha 63.3% · Jazan 63.5%

On track: second SAR 20M released.

END OF PERIOD · DEC

All four at 65%

Every region within 0.7 pts of target. Results reported back here.

A region that misses its Day-90 mark comes back to this committee before its second half is released.

How the numbers were calculated

Item	Definition
Adoption	$\text{SUM}(\text{digital \%} \times \text{unique users}) \div \text{SUM}(\text{unique users})$: weighted by users, not an average of percentages
Period	December 2025, the latest month in the Tayseer dataset (Jan 2022 – Dec 2025, 13 regions)
Gap	65 minus the region's December 2025 adoption, in percentage points
Option C	$\text{SAR } 40\text{M} \times \text{region's gap} \div 10.6$ (total gap of the four regions 2+ points short)
Day-90 mark	December 2025 rate + a quarter of the region's gap to 65% (release gate for the second SAR 20M)
Cost	Average cost per transaction (SAR) by region, from the CSAT vs Cost view; a correlation, not a causal estimate
